CommsLearning Public Courses

Join CommsLearning, ATG & FTTX for a balance of essential theory and hands on practice using the latest tools and testers on a course that gives you everything you need to become a Fibre Optic Association "CFOT". Conducted in small groups, our public training courses provide an interactive learning environment with sessions tailored to the audience.

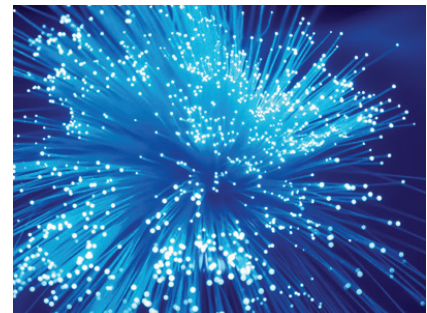

Fibre Optic Association - Certified Fibre Optics Technician

WHY ATTEND:

FOA CFOT certification is based on an extensive knowledge of fibre optics technology and applications as well as demonstrated skills in appropriate tasks.

Not all CFOT courses are the same. This course has been tailored to be New Zealand / UFB specific!

Most people working in the industry as contractors or installers, consultants, network designers, estimators and trainers would be expected to have certified credentials. The NZ CFOT certification has been designed to give you the fundamentals of fibre with extensive hands-on splicing and testing using the latest equipment. Use our splicers, inspection scopes, light sources, power meters etc and leave the course with an **internationally recognised certification** plus the knowledge, skills and ability that you'll need to work on the UFB, RBI or any other fibre project.

The FOA CFOT exam includes a test of the applicants level of knowledge of fibre optics in a broad-based exam that covers technology, components, installation and testing and requires verified practical skills in fibre optics.
